This is the default. Generate code in K&R C. The default is ANSIC. -Dname[=value] Define a symbol name. Equivalent to the #define directive in the source. If no value is given, value is defined as 1. This option may be specified more than once. -h Compile into C data-definitions (a header file).

PART I: Using The Protocol Definition And Example Co ...

In computer networking, a protocol defines a standard way for computers to exchange information. Most common protocols used in computer networks and the internet are TCP (Transmission Control Protocol), UDP (User Datagram Protocol), and IP (Internet Protocol). A port in computer networking is a logical access channel for communication between two devices.

What are ports and protocols ? :: SG FAQ

The HTTP is the application protocol for distributed and collaborative hypermedia information system. The default port of HTTP is 80 and 443 is the secured port. File Transfer Protocol (FTP) The FTP is the most common protocol used in the file transferring in the Internet and within private networks. The default port of FTP is 20/21.

Common Network Protocols and Their Ports - InterServer Tips

Protocol: RDP Default Port: 3389. Secured file transfer system. Protocol: SFTP Default Port: 115. Provides shared access to file and printers. Protocol: SMB Default Port: 445. Provides no internet access in a workgroup network. Protocol: NetBEUI/NetBIOS Default Ports: 137/139/150. YOU MIGHT ALSO LIKE...

HTTP means HyperText Transfer Protocol.HTTP is the underlying protocol used by the World Wide Web and this protocol defines how messages are formatted and transmitted, and what actions Web servers and browsers should take in response to various commands.. For example, when you enter a URL in your browser, this actually sends an HTTP command to the Web server directing it to fetch and transmit ...

What is HTTP - HyperText Transfer Protocol? Webopedia ...

A default gateway in Internet jargon is a term for a hardware node or point that will provide outgoing access to data packets to a destination in some other discrete network. Default simply means that this gateway is used by default, unless an application specifies another gateway. The default ...

What is a Default Gateway? - Definition from Techopedia

IP address is short for Internet Protocol address. An IP address is an identifier for a computer or device on a TCP/IP network. Networks using the TCP/IP protocol route messages based on the IP address of the destination. Contrast with IP, which specifies the format of packets, also called datagrams, and the addressing scheme.. Recommended Reading: Webopedia's Internet Protocol (IP) definition.

What is an IP address? Webopedia Definition

DHCP (Dynamic Host Configuration Protocol) is a network management protocol used to dynamically assign an Internet Protocol address to any device, or node, on a network so they can communicate using IP.DHCP automates and centrally manages these configurations rather than requiring network administrators to manually assign IP addresses to all network devices.

DHCP (Dynamic Host Configuration Protocol)

The Extensible Authentication Protocol (EAP) is a protocol for wireless networks that expands on the authentication methods for the Point-to-Point Protocol (PPP).

What is Extensible Authentication Protocol (EAP) ...

PEAP (Protected Extensible Authentication Protocol) is a version of EAP created to provide more secure authentication for newer 802.11 WLANs (wireless local area networks) that support 802.1X port ...

What is PEAP (Protected Extensible Authentication Protocol) ...

A port number is a way to identify a specific process to which an Internet or other network message is to be forwarded when it arrives at a server.For the Transmission Control Protocol and the User Datagram Protocol, a port number is a 16-bit integer that is put in the header appended to a message unit.This port number is passed logically between client and server transport layers and ...
