1) Install a NPN transistor on the K27 main board in the tender. Almost any NPN transistor will work. A suitable one that is easy to install is Radio Shack #276-2017. At the side of the K27 main board in the tender are solder pads with holes. Transistors have three pins. One is Base, One is the Collector and the third is the Emitter.

### **Phoenix Sound P5 - Bachmann Industries**

Bachmann placed all the required electronics in the tender of the K27, so the locomotive itself will not be altered in any way during the installation of the sound board. Furthermore, nothing in this installation prevents the tender from being returned to its original condition for re-sale at a later date.

Improving the K27 . This page will have tips from TOC (a.k.a. The Old Curmegeon, a.k.a. Dave Goodson) Please be patient as this page is organized. Cab Doors. The cab doors do not open a full 90°, rather about 60°. This bothered me a little, as with doors open, I like them fully open.

### **Improving the K27**

The chuff for the K27 is inverted to what the Phoenix desires as a chuff input so you have to use a simple inversion transistor. The Bachmann/QSI instructions show a simple way of doing this. This inversion transistor is not needed for a 2-6-6-2 install.
