Hawaii Island. It feeds on Opae'ula (Halocaridina rubra) which are found in anchialine ponds around the island. Due to high development of the coastline on the island, alchialine pools are decreasing and becoming less common. Only birds that can successfully fly the long distances in search of Opae'ula will live long enough to breed successfully.

Each graph represents measurement of finch beaks during a specific year. Look at the legend in the upper right of the graphs. The first represents all of the birds on the island in 1976 and the second all of the birds on the island in 1978. The answer to this question requires looking at each graph individually rather than comparing the two graphs.

LAB 3 - University of North Carolina at Greensboro

Plum Island is on the Atlantic flyway that runs from the Florida coast up the eastern seaboard to Greenland. A million birds rest on the island before flying on to the Connecticut River estuaries in Lyme, CT. It is possible but doubtful that the Army also overlooked the fact that deer regularly swim between the island and the mainland.
