and the operations manager will then face various distinct operations decision areas in which design choices have been made. As Fig. 22.2 shows, these decision areas are interrelated. Choices in any one area, such as designing an operations control system, must be consistent with choices in all the other areas, such as the types of interpersonal skills adopted in the operations system.

Operations Design (With Diagram)| Management

In order to manage rapidly escalating design complexities, we need to scale design by applying our own design-thinking and user-centered methods to design processes. (Meta, I know.) Components of Design Operations. DesignOps is an intentionally broad topic, because there are many elements related to enabling consistent, quality design.

There are countless ways for an operations manager to design a process. What constitutes a good or bad design depends on what your objectives are. Some general rules of thumb can help you maximize your process design and achieve your goals. Consider the effects of the placement of activities in the process. Serial processes have [...]
