The Image-Guided Autonomous Robot (IGAR) was created using technologies from both the space shuttle and space station, including the Canadian Space Agency (CSA) Canadarm, Canadarm2 and Dextre. IGAR works in tandem with an MRI scanner to aid in more precise targeting of tumors, and in needle-based biopsies or lesion removal.

### These Are the Robots You're Looking For | NASA

The Robots were a species of cybernetic life-forms that were potentially made by a mysterious alien species. The first known contact between the Robots and humanity came with the Christmas Star. This was detailed to the public as a super bolide meteor which had crashed to the Earth, but was actually a spaceship piloted by Scarecrow, one of these Robots. The crash left him in a damaged state ...
